VERISTAT

Accelerate Trial Success with Data Management Excellence

Optimize Your Clinical Trial Data with Veristat

Veristat provides flexible, customized data management solutions throughout the lifecycle of a clinical trial to meet the unique needs of your programs. We collaborate with sponsors to optimize electronic data capture (EDC) solutions, streamline data processes, and proactively plan for each study phase.

Our focus is on delivering high-quality data management services that ensure your data's accuracy, integrity, and regulatory submission readiness.

Our Impact in Numbers

In the last 5 years, our Data Management Teams have supported:

Nearly 200 clinical studies across all phases

Launched and locked databases faster than the industry norm

Client success across North America, Europe, and Asia

Expertise from Start to Submission

Strategic Data Planning & Consultation

- Strategic program-level planning and protocol consultation
- Guidance on EDC system selection and optimal setup
- Case Report Form (CRF) design aligned with current SDTM standards

Data Integration & Cleaning

- Medical coding with WHO Drug and MedDRA
- SAE reconciliation across data sources
- Integration and verification of external data (e.g., labs, ePRO, imaging)
- Local lab reference range management for accurate interpretation

Database Design & Development

- Custom EDC solutions tailored to complex protocols
- Full database setup, development, and maintenance
- Data validation via programmed and tested edit checks
- Detailed specs for automated and manual data review
- Ongoing cleaning & query management for data quality

Regulatory Submission-Ready Data Management

- EDC user training and ongoing system support
- Clean and timely database lock with full audit trail
- Secure data transfers prepared for regulatory submission and archiving

Data Management Success Stories

1 Guiding EDC Strategy for a Rare Disease Trial

A biotech sponsor running a Phase II rare disease trial needed expert guidance to select an EDC system and design an efficient data strategy. With no internal data management team and a complex protocol, they turned to Veristat. Our team engaged early to recommend a best-fit EDC based on study needs, design SDTM-aligned CRFs for clean data and future submissions, advise on essential data elements to ease site burden, and plan for external data integration. The result: the EDC system was built and tested in just eight weeks, with low query volume and strong usability feedback from sites. The sponsor is now fully prepared for Phase III planning. **Learn more** ›

2 Optimizing Clinical Trial Databases for Efficiency and Compliance

Veristat partners with sponsors to strategically design clinical trial databases that align with both operational efficiency and regulatory requirements. By understanding stakeholder needs—such as SDTM compliance for regulatory submissions, real-time reporting for data managers, and intuitive eCRFs for site coordinators—we build databases that minimize query resolution time, support rapid decision-making, and streamline downstream data transformation. Whether prioritizing usability or submission-readiness, our approach balances speed, scalability, and scientific rigor from day one. **Learn more** ›

3 Rapid Database Launch for First COVID-19 Vaccine Trial

In March 2020, Veristat partnered with a long-time client to urgently support a Phase I clinical trial for a novel coronavirus vaccine in the U.S. With just two pre-identified sites and 30 patients, the path to enrollment hinged on the rapid launch of the clinical trial database. Veristat provided full biometrics support—including project and data management, biostatistics, medical writing, and electronic submissions. Through a split-release strategy, the team built, tested, and launched the database in just 10 business days. This enabled immediate patient screening and dosing, with the first DSMB review occurring within weeks. The team's adaptability and speed ensured timely trial progression during the early chaos of the pandemic. **Learn more** ›

Where Science Meets Data to Improve Lives

Access around-the-clock support from Veristat's global Clinical Data Management Team, operating across North America, Europe, and Asia Pacific. We deliver proven expertise, flexible delivery models, and high-quality data from startup through submission.
